

# Maximize Equipment Efficiency & Save Lives With CO and Combustion Diagnostics Certification from National Comfort Institute

Presented by NCI January 7 - 9 with HVAC Performance Products

**National Comfort Institute** brings you one of the leading authorities on Carbon Monoxide and Combustion Efficiency. With over 30 years of experience in the field you'll find no other instructor to provides this depth of CO/Combustion analysis.

**On Day 1 (102) get a complete background on Carbon Monoxide.** You'll learn the dozens of locations that invisible CO gasses may show up - places no one would typically think to check for CO.

**Become an expert on Carbon Monoxide** by learning the proper protocol for addressing an existing CO situation to protect yourself and your company from liability. Hear actual examples of how CO gasses act and how to prevent CO from building up in your customer's home or office.

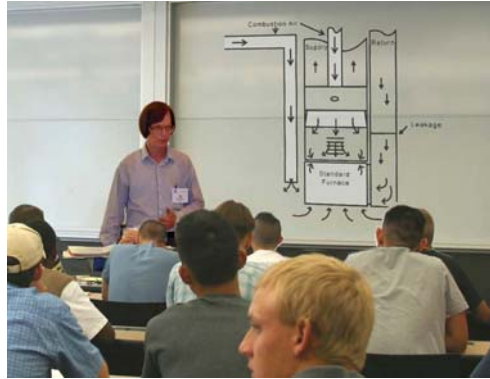

**Learn to operate the latest CO detection and combustion testing tools** that are vital to performing proper combustion testing and preventing Carbon Monoxide from harming you and your customers.

Get NCI's exclusive **SAFEMAXX procedure**. This useful form and procedure is the basis for your CO testing. It provides an understandable format to present test results to your customer and helps sell additional combustion efficiency services.

NCI is proud to have our training supported by NORA, ACCA, NATE and many states requiring CEU training.

**Day 2 (202)\* Learn to maximize efficiency & sell system upgrades** to deliver valuable energy savings for your customers.

You will learn to:

- Understand real efficiency
- Make proper fuel/air adjustments
- Troubleshoot field problems
- Repair or tag defective systems

**Build off the basic Carbon Monoxide training** you will get in Day-1 and get right into troubleshooting combustion problems and fixing them.

**Find out when it's appropriate to "yellow tag" or "red tag"** poorly operating combustion equipment.

**NCI provides all the knowledge you need** to do the work professionally and safely for you and your customers.

## HVAC

Performance Products

**Become the Carbon Monoxide expert in your local community.** Be the source that police and firemen call when they come across Carbon Monoxide hazards. This course will start you on your way to becoming a true CO professional.

**And finally, NCI's Day 3 (302) includes review and national certification exam.** Begin this exclusive certification day with a quick review of materials presented in Days 1 & 2. You'll get some valuable "hands-on" training that can be a real confidence builder.

**Next you'll take your national CO Certification test** and, upon passing, receive a nationally recognized CO/Combustion Analysis Certification to use in your sales and marketing materials.

**The best CO/Combustion Training available.** Don't be fooled by other no-substance events that promise everything but can't deliver. NCI's program is a proven process that has been successful with thousands of contractors across the nation.
